

## WATER DAMAGE PROTECTION

It is not easy for the homeowner to know where everything is behind the wall. Most only consider aesthetic and functionality when locating the ideal stud(s) to hang a picture or TV mount.

If a homeowner drills into a stud and inadvertently pierces a water line, he or she will not likely know they have a water leak hiding behind the wall until the damage is already done. Add another layer of protection to your home by protecting your water lines at every stud.

### AN EASIER & SAFER METHOD TO PREVENT HIDDEN WATER LEAKS BEHIND THE WALL

- 360-degree PEX/PE-RT protection from screws, nails & drill bits in every stud.
  - Inner Diameter: 7/8" Outer Diameter: 1 1/8".
  - Acceptable Nominal Thickness: 3/8" & 1/2".
  - 3/4" and 1" PEX & PE-RT protection coming soon.
- 
- An easier and safer protection alternative to nail plates.
  - Drill into your walls with added peace of mind, knowing your water lines are protected from your drills, screws, nails, and bolts.
